

ABSTRACT OF THE DISCLOSURE

An automatic drug dispenser includes: a drug cassette which
ejectably accommodates drugs; a base unit which detachably
5 supports the drug cassette and drives a motor to eject drugs; a
drug feeder storage which is designed to store a large number of
base units; a reading device which is provided in each of the base
units and reads identification information assigned to the drug
cassette; and a checking means which compares a result of reading
10 with pre-stored check data, wherein a microprocessor is mounted
in each of the base units, and the checking means, the check data
and history information related to the cassette are built in each
microprocessor in a distributed manner.
